                                                                                                                                                                                                                                                                                                                                              * NOTE: This is a 'working draft' sequence. It currently consists of 10 contigs. Gaps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have provided by the submittor.

* This sequence will be replaced by the finished sequence as soon as it is available and the accession number will be preserved.

* This sequence will be reserved.

* This gequence as soon as it is available and the accession number will be preserved.

* 47271 gap of unknown length

* 47371 S8115: contig of 10745 bp in length

Specifically, the indicated order and orientation of each sequence contig has been established using one or more of the following: read-pair data from individual subclones, overlaps with neighboring clones, alignment with available reference sequence (e.g., human), and/or confirmation by PCR testing. In addition, the sequence assembly is based on at least BX average coverage in Q20 bases and has been reviewed to rule out gross misassemblies, the low-quality ends of sequence contigs have been trimmed away, and each base is associated with a Phrap-derived quality score.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Submitted (21-FEB-2003) NIH Intramural Sequencing Center, 8717 Grovemont Circle, Gaithersburg, MD 20877, USA (bases 1 to 174724)

* NOTE: This is a 'working draft' sequence. It currently consists of 12 contigs. Gaps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have provided by the submittor.

* This sequence will be replaced by the finished sequence as soon as it is available and the accession number will be preserved.

* 28307 28406: gap of unknown length

* 28407 37856: contig of 2850 bp in length

* 37857 73522: contig of 3856 bp in length

* 73623 83677: contig of 3856 bp in length

* 73623 83677: contig of 9450 bp in length

* 83568 836677: contig of 9450 bp in length

* 83688 838677: contig of 9450 bp in length

* 83688 838677: contig of 9450 bp in length

* 83688 888177: contig of 9450 bp in length

* 83688 888177: contig of 9450 bp in length

* 88918 125611: contig of 5150 bp in length

* 88918 125611: contig of 3694 bp in length
                                                                                                                                                                                                                                                                                                                      The sequence data in this record represents an 'enhanced' version of a Phase 2 submission. Specifically, the indicated order and orientation of each sequence contrig has been established using one or more of the following: read-pair data from individual subclones, overlaps with neighboring clones, alignment with available reference sequence (e.g., human), and/or confirmation by FCR testing. In addition, the sequence assembly is based on at least 8% average coverage in Q20 bases and has been reviewed to rule out
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           gross misassemblies, the low-quality ends of sequence contigs have been trimmed away, and each base is associated with a Phrap-derived quality score.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequencing vector: plasmid; n/a; 100% of reads Chemistry: Dye-terminator Big Dye; 100% of reads Assembly program: Phrap; version 0.990319 consensus quality: 196656 bases at least Q40 consensus quality: 197883 bases at least Q40 consensus quality: 197883 bases at least Q20 lnsert size: 215000; agarose-fp lnsert size: 215000; agarose-fp plast coverage: 9.03x in Q20 bases; sum-of-contigs Quality coverage: 9.73x in Q20 bases; sum-of-contigs

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         NOTE: This is a 'working draft' sequence. It currently consists of 32 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                  Center: Washington University Genome Sequencing Center
                                                                                                                                                                                                                                                                                                                                                                  Quality coverage: 3.86 in Q20 bases, agarose-fp
Quality coverage: 3.87 in Q20 bases; sum-of-contigs

                                                                                                                                                                                                                    useful for preventing, diagnosting and treating diagnosing a cardiovascular, enouthellal or angiogeneis diagnosing a cardiovascular, endothelial or angiogeneis diagnosing a mammals by modulating cell proliferation, angiogenesis and cardiovascularisation, and for identifying agonists and antagnomists of these processes. The nucleic acids and the proteins they encode may be used in the prevention, treatment and diagnosis of diseases associated with inappropriate PRO expression such as cardiovascular, endothelial or angiogenic disorders in mammals (e.g. atherosclerosis, cancers and cardiac hypertrophy). For example, the nucleic acids (NCs) and vectors containing them and the PRO polypeptide may be used to treat disorders associated with decreased PRO expression.                          The present invention describes an antibody that binds to a human protein

(1) selected from: PRO381; PRO1269; PRO1410; PRO1755; PRO1780; PRO3434;

PRO1927; PRO3567; PRO1925; PRO1293; PRO1303; PRO4344; PRO43454; PRO43407;

PRO4407; PRO1555; PRO1096; PRO2038; and PRO2262. (1) has anticancer activity and can be used to diagnose tumours in mammals, by detecting complex formation when the antibody is contacted with test cells.

Increased expression of genes encoding (1) can also be detected to diagnose tumours. Agents which inhibit the activity of (1), especially the antibodies, or an antisense oligonuclectide which hybridises to genes encoding (1), can be used to inhibit the present invention can be used to inducing cell death. Methods from the present invention can be used to inducing cell death. Methods from the present invention can be used in examples from the present invention for human PRO sequences. AACS8103 to AACS812 and AAR24021 to AAAS812 and AAR24021 to AAAS812 and AAR24021 to Prepresent human PRO polynucleotide and protein sequences given in the exemplification of the present invention

```
AAA37022 to AAA37144 encode the new isolated human transmembrane, receptor or secreted PRO polypeptides given in AAY9340 to AAY99462. The transmembrane and receptor PRO proteins can be used for screening of potential peptide or small molecule inhibitors of the relevant receptor/ligand interactions. The polypeptides and nucleotide sequences modding then have various industrial applications, including uses as pharmaceutical and diagnostic agents. AAA37145 to AAA37330 represent PCR polypeptides from the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New mammalian DNA sequences encoding transmembrane, receptor or secreted PRO polypeptides, useful for screening of potential peptide or small molecule inhibitors of the relevant receptor/ligand interactions.

                                                                                                                                                                                                                                                                                                                                                                                                                               Fong S;
Hillan KJ;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention relates to secreted and transmembrane proteins. These proteins and the DNA encoding them may be used as hybridization probes, in chromosome and gene mapping and in the generation of antisense RNA and DNA. They may also be used used to generate either transgenic animals or knockout animals which are in turn useful for development and screening of therapeutically useful reagents. The nuclacids may also be used in gene therapy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Watanabe

The invention relates to human PRO polypeptides and the polynucleotides encoding them. The sequences are useful in the preparation of a medicament for treating a condition responsive to a PRO polypeptide. The polypeptides are useful in a number of functional biological assays, as molecular weight markers for protein electrophoresis and as therapeutic
    Novel isolated PRO polypeptides e.g. PRO1491 and PRO1571, useful in the preparation of a medicament for treating a condition responsive to PRO polypeptide, and as therapeutic agents e.g. vaccines.
                                                                                                                                                                                                                                                                                                                                                                                                                                                           GAGGGACCAGCCTGCGCGCGCGCGCGTGTTTTTTGACCACAGGTGGGTCCTCTACAGCG

The invention relates to an isolated PRO polypeptide (secreted or transmembrane protein) having at least 80% amino acid sequences as to a maino acid sequence chosen from 123 fully defined sequences as or amino acid sequences enclosen from 123 fully defined sequences as or without their associated signal peptides. Also include are the nucleotide (Ma) sequences encoding PRO, a vector comprising the PRO NA, a comprising PRO fused to a heterologous amino acid sequence, and an anti-encomprising the vector, producing PRO, a chimaeric molecule PRO antibody. Pro is useful as molecular weight markers for protein useful for tissue typing. PRO and PRO NA are useful as hybridisation probes for a cDNA library to isolate the full-length PRO cDNA. PRO NA is useful for tissue typing. PRO and PRO NA are useful in development and screening useful reagents. PRO NA is also useful in development and screening useful reagents. PRO NA is also useful in development and screening useful reagents. PRO 1410 propeptides are useful for suppressing immune response. PRO1246 and PRO1410 polypeptide is useful for reacting cancerous tumours. PRO1250, PRO1418 and PRO146 polypeptide is useful for treating cardiac insufficiency disorders. PRO1546 polypeptide is useful for treating cardiac insufficiency disorders. PRO1546 polypeptide are useful for treating tumours. PRO1246 and PRO1450 polypeptides are useful for treating bence and obesity. PRO1255, PRO1418 on PRO1418 and wound healing. PRO1156, PRO1555 and PRO1418 and wound healing. PRO1255 and PRO148 are useful for treating berger disease or other nephropathies associated with Schonlein-fleaten purpura, coellac disease, dermattitis, herpetiformis or Crohn's Glassase. PRO1478, PRO1265, PRO1419, PRO1265, PRO1419, PRO1265, PRO1419, PRO1265, PRO1419, PRO1265, PRO1419, PRO1265, PRO1419, PRO1265, PRO1419, PRO1265, PRO1419, PRO1265, PRO1419, PRO1265, PRO1419, PRO1265, PRO1419, PRO1265, PRO1419, PRO1265, PRO1410 and PRO1575 are useful in treating thalassaemias. Note="Vector: pspoRT1; Site 1: Not I; Site_2: Sal I; Five libraries representing BIO.5/12.5 pancreatic bud, E16.5 pancreas, and adult pancreas, and adult pancreas, and adult islets of Langerhans were seperately constructed using SuperScript Plasmid Library kit (Life Technologies). CDNA was made by oligo-dT priming and size-selected by column fractionation. Libraries were amplified once on solid support and plasmid DNA from each library was prepared and mixed in equal amounts. The mixed library DNA was normalized by method #4 from Bonaloo, Lennon, and Soares 1966 Genome Research 6:791-806; 0.5 microgram Single-stranded mixed library plasmid DNA was mixed with 5 micrograms PCR product representing mixed library inserts and hybridized to an Ecot of 6. Single-stranded (Unhybridized) plasmids were isolated by hydroxyapatite chromatography and used to make this library."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Tel: 617-495-1812
